

Not In Our Time: Transport-Based Content Selection

An Inspectable, Manipulable Alternative to RAG — Demonstrated on Literary Discussion Podcasts for 15 Victorian Novels

MIDWEST SPEECH & LANGUAGE DAY 2026

“Fog everywhere. Fog up the river, where it flows among green aits and meadows; fog down the river, where it rolls defiled among the tiers of shipping and the waterside pollutions of a great (and dirty) city. Fog on the Essex marshes, fog on the Kentish heights.”

— Charles Dickens, *Bleak House* (1853), Chapter 1

The Question

A reader who surveys a novel broadly and a reader who studies it narrowly will assemble different evidence for discussion. Do they arrive at different discussions?

We implement two reading strategies as passage-selection algorithms applied to **15 Victorian novels**, then generate structured multi-voice literary discussions from each selection.

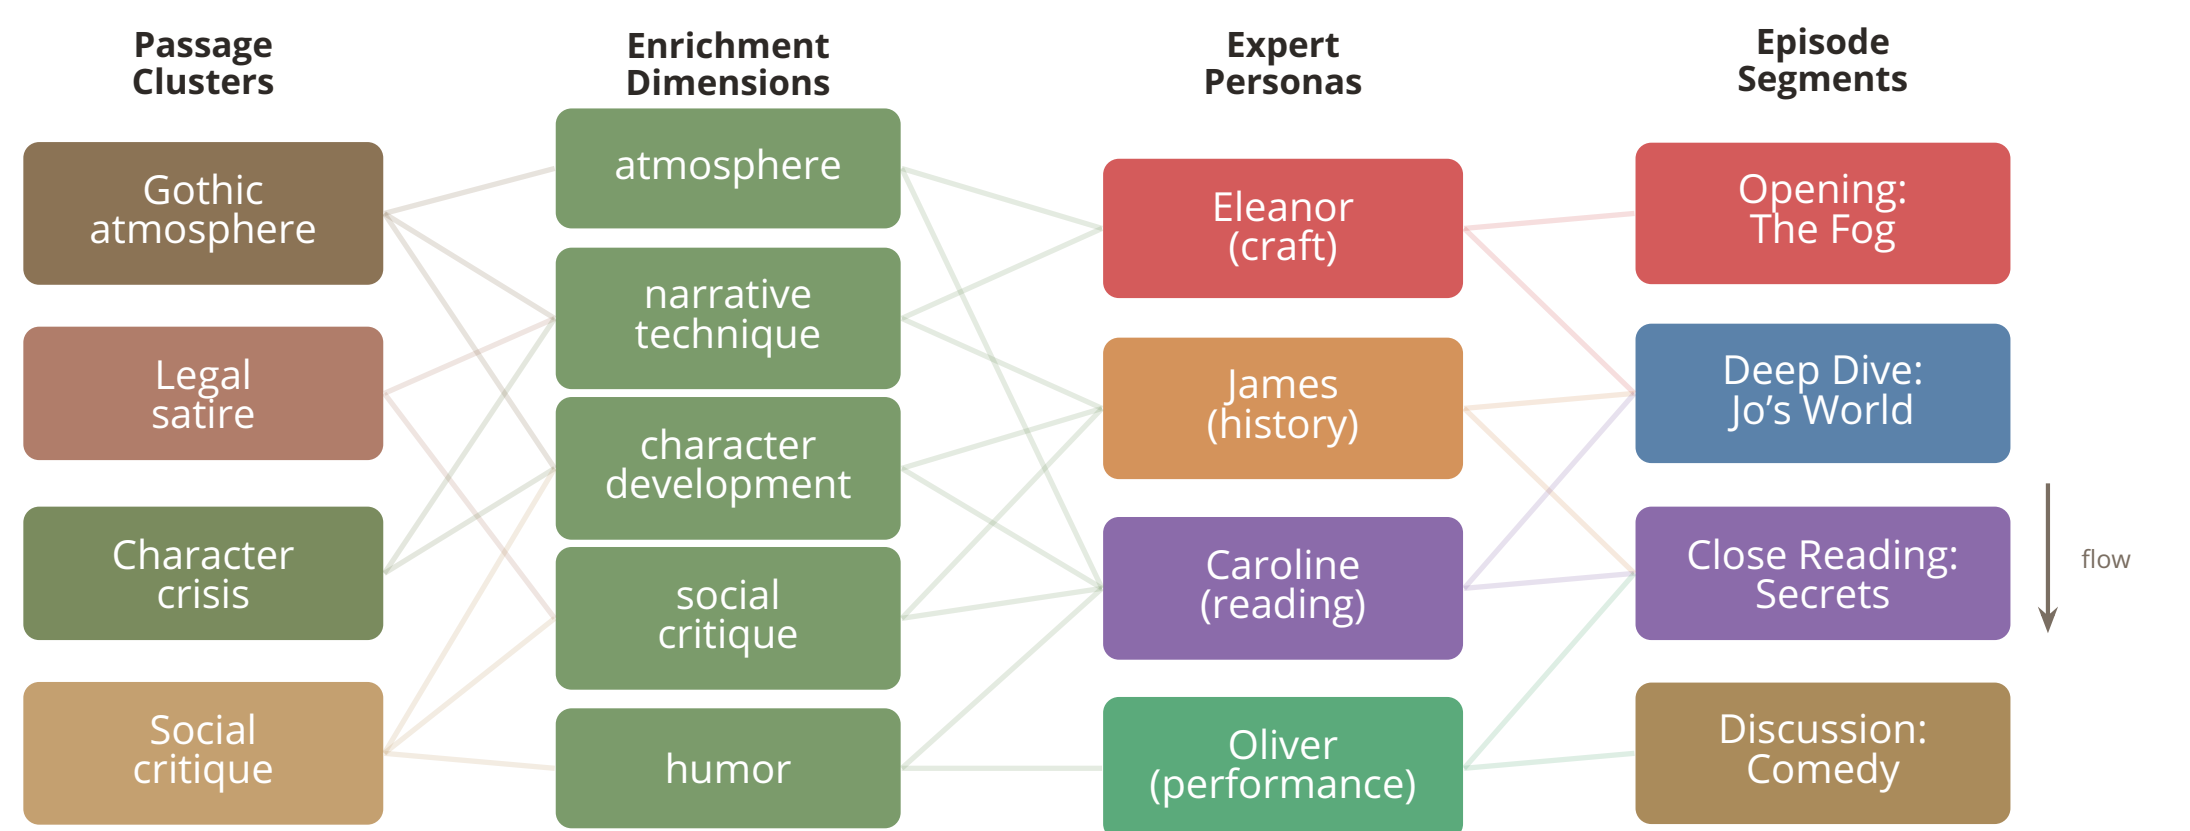

15 novels	60,774 passages	180 conditions
---------------------	---------------------------	--------------------------

Seven authors (Dickens, Eliot, Gaskell, Forster, Collins, Gissing, Oliphant), seven decades (1850–1924).

“And all that night the coffin stands ready by the old portmanteau; and the lonely figure on the bed, whose path in life has lain through five and forty years, lies there with no more track behind him that any one can trace than a deserted infant.”
— Bleak House, Ch. 11 — The death of Nemo

Min-Cost Flow Selection

Passages flow through enrichment dimensions and expert demand nodes to episode segments. Every arc is inspectable and adjustable.

Two Reading Strategies
Synoptic (min-cost flow): 59 passages from 28 chapters. Favours character development (+8.3 pp) and plot (+10.2 pp). Zero LLM tokens, <1 s.
Analytical (embeddings + LLM curation): 32 passages from 20 chapters. Favours social critique (+13.4 pp) and thematic depth (+6.9 pp).
No-passages: LLM discusses from prior knowledge alone.

The Reader Makes the Reading

The pipeline privileges expert identity at every stage — enrichment dimensions match demand profiles, the selector optimises for demand satisfaction, host preparation targets specific experts, and the script prompt reinforces perspectives. Convergence follows from this engineering.

Synoptic	Analytical
59 passages, 28 chapters Character & plot focused Min-cost flow solver	32 passages, 20 chapters Critique & theme focused Embedding retrieval + LLM
J = 0.057 <6% overlap in passages	

Yet: Expert Airtime Stable to ±2%

Eleanor Hartley (literary critic): **32–37%** James Blackstone (social historian): **30–37%** Caroline Woodcourt (close reader): **29–34%**
Each stage reinforces the framework. The convergence is suggestive of Fish's (1980) thesis — but the engineering is the mechanism, and we name it honestly.

Two Panels Discuss *Bleak House*

Literary Panel

Eleanor Hartley (Literary Critic):
“What strikes me about that Nemo sentence is the grammatical audacity of it. ‘A deserted infant’—Dickens reaches for the most helpless possible image of erasure. The infant image should be about beginning, and Dickens flips it into a closing.”

James Blackstone (Social Historian):
“The fog is not decoration. It is the Court of Chancery made visible. ‘Lies there with no more track behind him that any one can trace than a deserted infant.’ That sentence is the whole novel compressed into a single image.”

Caroline Woodcourt (Close Reader):
“Readers sometimes use the fog as a kind of permission—‘this is a great symbolic novel, I’m in the presence of Literature with a capital L’—and then they stop actually listening to what Dickens is telling them. What moves me is something far quieter—the moment where a human life is described as leaving no trace.”

Interdisciplinary Panel

Sarah Chen (NLP Scientist):
“That is a noun phrase with four pre-nominal modifiers, each compounded—and then ‘brazen-faced’ pulls the floor out. The first three feel like nautical specifications—they’re doing the register of technical competence—and the fourth is an insult.”

Elena Volkov (Musicologist):
“Institutions don’t announce their corruption—they announce their solidity, their procedure, their continuity. I spent years studying how Soviet conservatories presented themselves as nurturing talent while systematically destroying composers who stepped out of line.”

Rebecca Martinez (Astronomer):
“The ships of Law and Equity aren’t sunk, they’re in reserve. In my field, we’d say the system is in a quasi-stable state. The energy is there. Nothing has been resolved. The fog is the natural atmosphere of a system that has never actually resolved anything.”

The experts bring their **metaphors** (quasi-stable states, leitmotifs, phrase structure) but not their **methods** — the scaffold imports literary-critical norms regardless of the persona.

The Knowledge Gradient

Without passage grounding, the LLM produces graduated pastiche — not hallucination. Fidelity tracks novel prominence.

82% of invented quotes draw 90–100% of their words from the novel’s own vocabulary.
Mean overlap: 95.1%.

Ungrounded Quote Verification (%)

<i>Middlemarch</i>	Eliot	57
<i>Bleak House</i>	Dickens	53
	David	44
<i>Copperfield</i>	Dickens	39
<i>Hard Times</i>	Dickens	39
	Passage to	39
<i>India</i>	Forster	37
<i>Mill on the</i>		37
	Floss	33
<i>Cranford</i>	Gaskell	33
	Daniel	30
<i>Deronda</i>	Eliot	29
<i>Our Mutual</i>		29
<i>Friend</i>	Dickens	20
	New Grub	20
<i>Street</i>	Gissing	6
	The Odd	6
<i>Women</i>	Gissing	3
<i>Miss Marjoribanks</i>	Oliphant	3
<i>North and</i>		2
<i>South</i>	Gaskell	0
<i>Hester</i>	Oliphant	0
<i>No Name</i>	Collins	0

Grounded conditions achieve **97–98%** for *all* novels. The gradient reflects analytical reinforcement in training data (Carlini et al., 2021, 2023), not prose style.

Pastiche in Action

“Name, Jo. Nothing else that he knows on. Don’t know that everybody has two names. Never heerd of sich a think. No father; no mother; no friends. Never been to school.”
— Bleak House, Ch. 11 — Jo’s testimony

“Fog everywhere. Fog up the river. . .”
Reproduced verbatim from LLM memory
Verified 100%

“I am very weak, but I shall begin the world.”
Every word appears in the novel, but this sentence does not exist
Invented - 100% vocab

“I don’t know nothink.”
Jo’s dialect remembered; phrasing reconstructed
Invented - 80% vocab

Key Findings

- Framework dominates strategy.** Two reading algorithms select <6% overlapping passages yet produce discussions with identical expert airtime (±2%). This convergence follows from a pipeline that reinforces expert identity at every stage — suggestive of Fish’s thesis, but the engineering is the mechanism.
- Pastiche, not hallucination.** Ungrounded LLMs write *in the style of* a novel, not *from* it. Fidelity tracks training-data exposure: a measurable knowledge gradient from *Middlemarch* (57%) to *Hester* (0%).
- Scaffolding is content-independent.** Host preparation raises questions from ~1 to ~11 per segment, uniformly across all 15 novels (5.3× to 14.1×). Dynamics are designed, not emergent.

Framework > Grounding > Strategy
The decomposition has a clear hierarchy. Framework determines character, grounding gates accuracy, strategy is surprisingly irrelevant.
